about Giahdoon

[Giahdoon](#) is the official website for the production and supply of essential oils in Iran, which tries to take steps to promote the use of essential oils by publishing specialized articles in this field.

What is essential oil and what is its use

Essential oil or natural plant essence are the aromatic compounds that make up the scent of a plant, which are mainly composed of terpenes. These compounds can be separated from the plant by distillation. Essential oils are the basic material required by many industries. A substance that is active in the cosmetic industry and the main raw material in the perfumery industry. Essential oils are widely used in the pharmaceutical and food industries as preservatives and natural flavors

due to their antibacterial and antimicrobial properties. Compared to vegetable oils, they have a shelf life of 2 to 3 years and some more. They are essential for the production of organic products and their applications.

They have a wide scope in organic pest control and production of organic poisons. The essential oil industry in the world has a turnover of several hundred million dollars, and various companies have started producing plants and extracting essential oil because of its great added value in the world. Essential oils have countless properties for physical and mental health, and that is why public favor is drawn towards them day by day. In the meantime, [Iran](#), as one of the few countries with four seasons of climate and sufficient sunlight, has the potential to produce medicinal plants with valuable and high effective substances. In recent years, the efforts of the government and officials of Iran to increase the area under cultivation of medicinal plants prove this claim. But there are still many capacities in the essential oil extracting sector, which made the team of [giahdoon](#) to carry out specialized work on extracting essential oils from native species of [Iran](#) for introduction to other countries. Since 2017, with a group of graduates of the field of

medicinal and aromatic plants, [giahdoon](#) officially started its work in the field of production and supply of natural plant essential oils in **Iran** and tries to supply natural essential oils produced from To provide the best quality native and cultivated plants of **Iran** all over the country at reasonable prices to pharmaceutical, perfumery and food industry companies as well as for aromatherapy purposes. These essential oils are all the result of water or steam distillation and are completely pure and without additives and are therapeutic grade. we has also been able to collect comprehensive information on [our website](#) in the specialized field of essential oils and provide it to those interested and experts in this field. **Giahdoon** is ready to enter into contracts with various companies that need natural essential oils from 5 grams to kilograms, and the company also has the possibility of exporting this product abroad. Most of our essential oils have an analysis sheet, and a new analysis is also done at the request of our dear customers.
